

Alexander Ivkin

Barcelona, Spain | [ivkin.dev](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Engineering leader turned hands-on builder who owns problems end to end — from identifying what's broken in the business to shipping the fix and measuring the impact. Built and sold a consumer app with 6K paying subscribers. Led engineering teams, owned product roadmaps, hired and mentored engineers. Combines deep technical IC work with team leadership, product thinking, and metric-driven decisions.

EXPERIENCE

Independent AI Consultant — Ivkin LLC (Jan 2026 – Present)

Helping companies ship production agentic AI systems end to end.

Fairmarkit — Bid Pulse (Jan 2026 – Present) Agentic RFQ monitoring system for a procurement marketplace — discovers relevant bids across 2.5M+ products, matches against supplier catalogs, and delivers email digests.

- Multi-stage matching pipeline with semantic search (pgvector) and LLM-based verification to surface high-relevance bids
- Admin dashboard with weekly KPIs, bid outcome tracking, and supplier analytics
- Stack: Python (FastAPI), TypeScript, React, PostgreSQL (pgvector), Terraform, Docker

Fairmarkit — Fair Platform (Mar 2026 – Present) Internal app platform that enables product managers and sales to build and ship production-ready prototypes to clients — bypassing the engineering roadmap bottleneck. Enables new revenue streams and faster client feedback loops.

- Built from scratch: AI-assisted IDE with live preview, git-based scaffolding, and one-click publishing to production
- Per-app Kubernetes isolation with automated lifecycle, security hardening (egress proxy, runtime threat detection, Okta SSO)
- Stack: Next.js, React, FastAPI, PostgreSQL, Kubernetes, ArgoCD, Terraform, DigitalOcean

Zumbach Electronic AG (Sep 2025 – Present) Reimagined UX for an industrial monitoring system used by 100K+ deployed devices worldwide. Replaced legacy touchscreen hardware with a modern web dashboard.

- Conducted factory floor operator research, identified workflow pain points, designed and built the replacement from scratch
- Real-time measurement dashboard with live streaming from industrial devices to web UI
- Stack: React, TypeScript, FastAPI, Python, ZeroMQ, Docker

Winrate.com — Head of Product Development (Aug 2025 – Jan 2026)

AI sales platform. Managed 4 engineers with full product ownership — roadmap, prioritization, delivery. Built the entire AI agent stack and supporting infrastructure.

- Built the production AI agent system end to end — account scoring, deep research with RAG across multiple data sources, call transcript analysis, human-in-the-loop workflows (LangGraph/TypeScript)
- Designed distributed job orchestration that scaled AI research agents to thousands of parallel jobs per hour — atomic rate limiting in Redis, backpressure-aware dispatching — without exhausting API rate limits or database connections
- Evaluation framework with multi-model comparison (Claude vs GPT-4) for continuous agent quality tracking
- Stack: Node.js, TypeScript, React, AWS (Lambda, SQS, EventBridge), PostgreSQL (pgvector), Redis, LangGraph

Ace Trace — Founder & CEO (2021 – Aug 2025, Acquired)

Mobile sports video editor / shot tracer. Built, grew, and sold the company.

- Grew to \$15K MRR, 6K paying subscribers, 10K monthly installs, 4.4-star App Store rating
- Ran extensive A/B tests on retention, pricing, and UX — killed features that didn't move metrics (social feed, auto-tracking)
- Hired and managed contractors for UX, ML research, QA; organized weekly testing cadence
- Built custom neural network for real-time object tracking in video and physics-based trajectory fitting

Enabled Health Inc. — Co-Founder & CTO (Jan 2024 – Feb 2026)

AI-powered physical therapy for hospitals. Raised \$200K pre-seed. Won MA Digital Health Sandbox grant.

- Led cross-functional team of engineers, designers, and data analysts across two hospital pilots
- Built iOS bedside trainer with computer vision exercise tracking and voice AI agent for patient communication
- Closed company when hospital sales cycles proved unsustainable; returned capital to investors

Recspert — CTO & Product Manager (Dec 2022 – Apr 2023)

Led team of 3 building a marketplace for recreational training sessions.

- Full-stack platform with Stripe connected accounts (75/25 split), real-time messaging (Twilio), background checks (Checkr)
- Stack: React, TypeScript, Node.js/Express, MongoDB, Stripe, Firebase Auth

ALM Works — Lead Software Developer (Apr 2015 – Mar 2022, 7 years)

Enterprise Jira plugin ecosystem. 5,000+ customers, acquired by Tempo Software (2021).

- Built Structure.Gantt from scratch, led team of 4 — cross-project timeline visualization, dependency tracking, resource allocation. 5,000+ installations
- Labs team: conducted customer interviews, prototyped and shipped Cross-Team PI Planner
- Interviewed engineering candidates and mentored junior developers over 7 years

Earlier Career

- **OpenWay Group** (2009–2015) — Built a testing framework for the Way4 card transaction processing engine — still in production use 15+ years later. Led Payment System Interchange team. Later moved to software development on web, mobile, kiosk, and ATM banking projects on the Way4 platform handling payments for 500+ organizations across 100+ countries
- **Sun Microsystems / Oracle** (2007–2009) — Test engineer on JDTS (Java Device Test Suite), testing JVM implementations across 11,000+ tests
- **InviewLab** (2009–2013) — Built spectral recognition software; Skolkovo Innovation Award 2011 finalist

EDUCATION

- Moscow Institute of Physics and Technology (MIPT) — PhD track (Computer Science)
- SPbGETU "LETI" — Master's degree, Electronics and Microelectronics

TECHNICAL SKILLS

- **Languages:** TypeScript, Python, Swift, Java, Kotlin, C++
- **AI/ML:** LangGraph, LangChain, OpenAI GPT-4, Claude, PyTorch, OpenCV, pgvector
- **Frontend:** React, Next.js, TailwindCSS, Vite
- **Backend:** Node.js, Express, FastAPI, PostgreSQL, Redis, MongoDB
- **Infrastructure:** AWS (Lambda, SQS, EventBridge, S3), Kubernetes, Docker, Terraform, GitHub Actions
- **Mobile:** Swift/SwiftUI, React Native
